No3 Background of the measures for promoting Goho-wood

Knowledge of Goho-wood has increased since 2006 when the measures for promoting Goho-wood began, based on the domestic Green Purchasing Law.

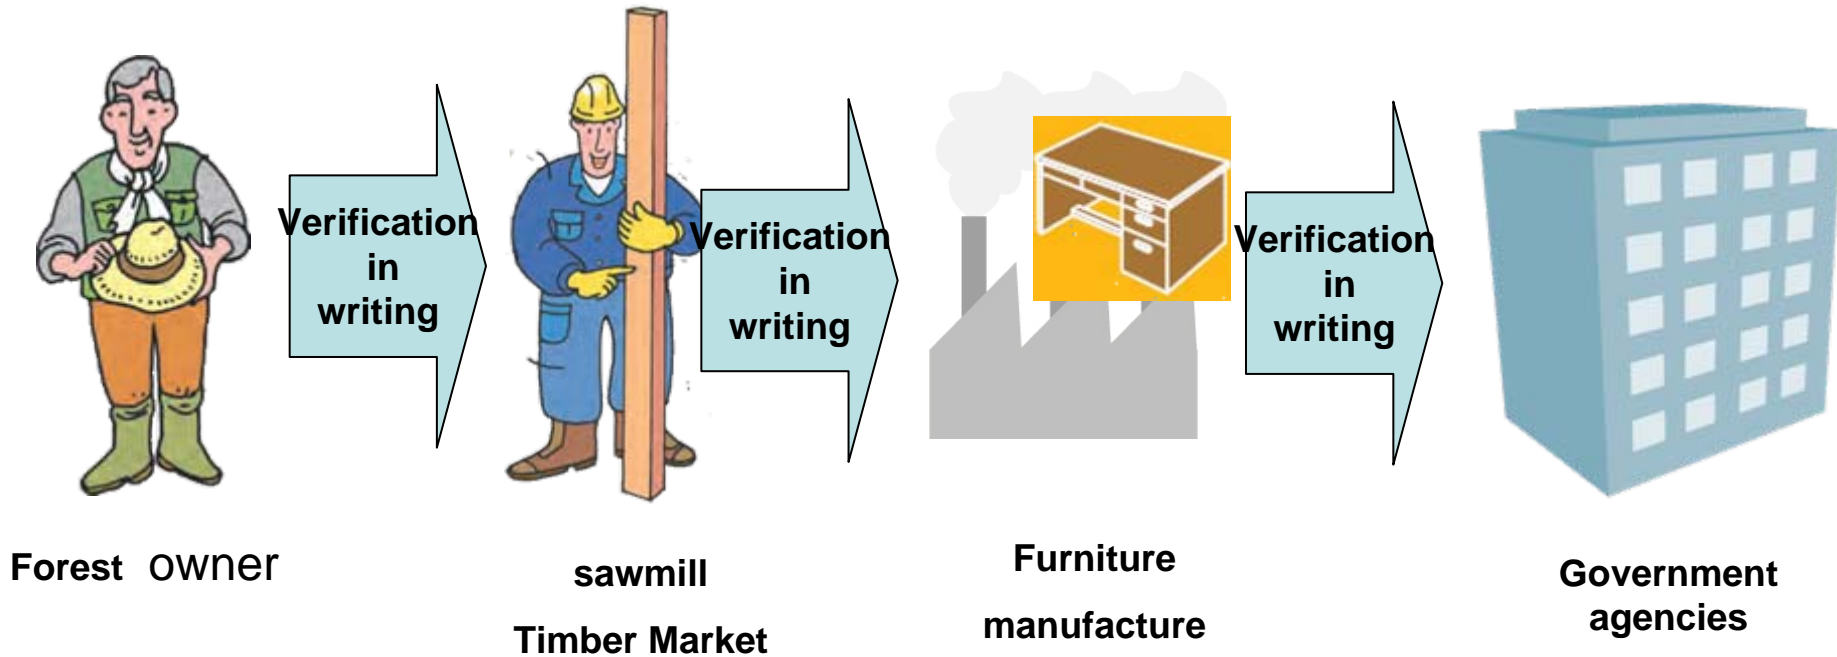

Though the Green Purchasing Law applies to only public works and facilities, the response rate to these measures seems to be increasing with high awareness among domestic materials manufacturers.

No3 Background of the measures for promoting Goho-wood

We consider that such national measures we are conducting for public works and facilities as an ordinary company on a regular basis will lead to a succession of measures in the future for ordinary consumers, and also lead to environmental conservation and observance of the law.

No3 Background of the measures for promoting Goho-wood

However, the degree of acceptance and recognition of Goho-wood in the Green Purchasing Law is, in fact, still low among ordinary consumers.

You know
Goho wood

No !

No4 Request to the supply side

On our issuance of Goho-wood certification, some companies still do not or cannot obtain authorization for Goho-wood suppliers, so that formal certification according to the domestic Green Purchasing Law cannot currently be provided in some cases.

Also, in regard to imported wood materials from overseas, we cannot obtain certification for some wood materials we treat, especially from China, because they have a wider variety of tree types, and because the measures taken in other countries are different and sometimes complicated.

No4 Request to the supply side

Unified measures, marks, and seals like that of the American Hardwood Export Council (AHEC) may be convenient.

No4 Request to the supply side

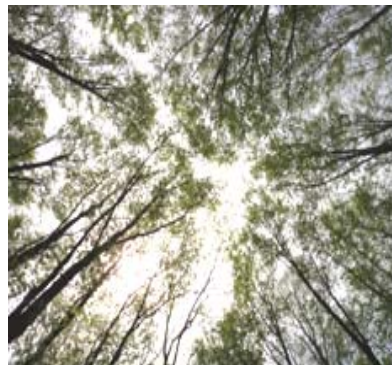

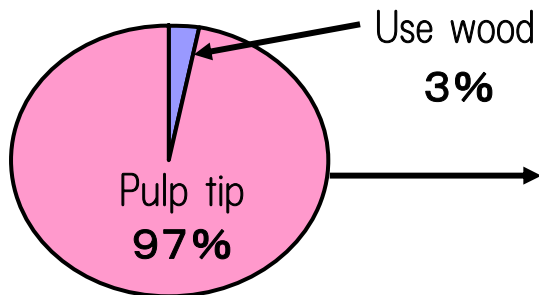

Though Japan is promoting the domestic consumption of domestic wood such as Japanese cedar and cypress, we still greatly rely on imported wood from overseas, so it is expected that Goho-wood certification measures will be expanded within Japan and overseas by establishing the circumstances for facilitating the issuance of Goho-wood certification to imported wood.

Since we, on the demand side, producing the products, are also suppliers to ordinary consumers, we are expected to prepare measures to ultimately ensure that all materials we treat is Goho-wood.

In order to realize the situation above, it is required, in particular, to explore methods for authorizing the materials and suppliers that find it difficult to obtain certification by elaborating detailed confirmation steps and procedures.

Japanese country forest about 65 %

But home consumption wood about 80 % import foreign country

【 Japanese hardwood 】

No4 Request to the supply side

Also for imported wood, since the measures are different from country to country, it is necessary to apply simpler nationwide measures such as unified standards, certification methods, standardized certificates, marks, and seals to the imported wood to cope with illegally logged wood.

It is important and necessary to provide details of measures in each importing/exporting country, since the knowledge of the measures being applied in the countries exporting wood to Japan are indispensable for us.

If possible, it is desirable to create a system to issue Goho-wood certification using a simpler way without requiring a special certificate.

No5 Challenges and problems to be solved

As already mentioned above, it is necessary to work with the companies concerned to establish measures so that all materials are Goho-wood.

As for our own efforts, we will implement measures to respond to demand from the national government, customers, and ordinary consumers by carefully examining and checking the wood materials whether they are applicable to Goho-wood.

By establishing COC certificated products under the forest certification process, we will also make efforts to promote Goho-wood and its certification system while focusing on COC certificated products.
